IC 1700

IN THE CLAIMS

Please amend the claims as follows:

5041/2
D1

13. (Amended) A powder composition, characterized in that the powder composition comprises delipidated egg yolk particles and a functional food material, which functional food material is selected from the group consisting of substances that have undesirable flavor and substances that are susceptible to deterioration, the functional food material being impregnated in pores of the delipidated egg yolk particles, and wherein an angle of repose is 60° or less, as
